

# C-BUS PLUG-IN FOR X...SERIES CONTROLLERS

**T 433**  
28.10.10 MZ  
REV. 01

**C ←BUS**

## ACB 400 / 460 / 468 C2 Eng.

- **Transmission speed: up to 9600 bps**

### 1. APPLICATION

The Plug-ins of the ACB 4... series, inserted in the appropriate communication slot of series X... controllers, have the function of enabling such devices to be Telemanged from a distance via C-Bus.

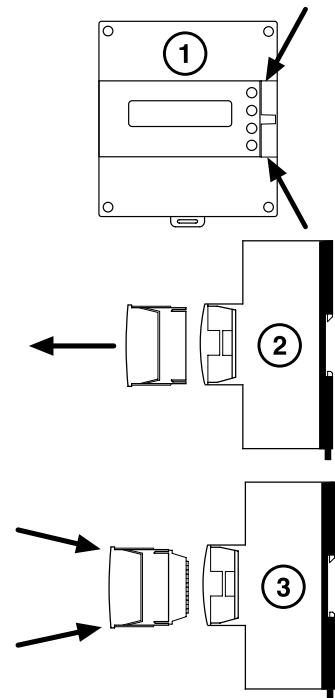

### 2. MODELS

Code	Description	Communication speed	Controllers
<b>ACB 400</b> <b>ACB 460</b> <b>ACB 468</b>	Plug-in for communication via C-Bus	9600 bps	<b>From the controller data sheet find the correct ACB... for use with the controller</b>

### 3. INSERTING THE PLUG-IN IN THE SLOT

To insert correctly the Plug-in in the appropriate slot on the controller, do as follows:

- ① lift up the module-type cover using a screwdriver at the points indicated in the diagram,
- ② withdraw the module-type cover,
- ③ insert the ACB module, pressing delicately with two fingers the points indicated in the diagram until the module is completely housed.

### 4. COMMUNICATION SPEED

To know the maximum communication speed available for each device, refer to the relative data sheet.

The maximum possible speed on each C-Bus network is that of the slowest device:

- Example 1:  
XTC 638 + XCC 618 + XCO 428 = maximum speed 9,600 bps,
- Example 2:  
XTC 638 + XSE 602 = maximum speed 1,200 bps.

All COSTER modems have a factory configuration of 1200 bps.

To re-configure to 9600 bps, a PC with an up-to-date COSTER SWC 701 program is required.

#### Amendment to data sheet

Data	Revision No.	Page	Section	Amendment description
28.10.10 MZ	<b>01</b>		All	Update to version C2
